Summary

Software developer with experience in **Python backend** and **Flutter/Dart mobile development**, building **REST APIs**, microservices and production applications. At Logon, I am responsible for the **Central da Escola** app, with more than **50 thousand active users**, and for Python/FastAPI supporting services, while also handling testing, CI/CD and publication on Android and iOS stores. I also built an ERP, POS and e-commerce SaaS with Django/Python and PostgreSQL, and conduct research on AI, LLMs and Software Engineering. Computer Science undergraduate at UFCG and ICT resident at VIRTUS-CC/UFCG.

Technical Skills

Languages: Python, Dart, JavaScript, TypeScript, SQL, C

Backend: Django, Django REST Framework, FastAPI, REST APIs, microservices, authentication, integrations between systems

Mobile: Flutter, Dart, Android, iOS, store publication, BLoC, WebSocket, componentization

Data: PostgreSQL, NoSQL databases, Redis, MinIO, data modeling

Infrastructure and DevOps: RabbitMQ, Docker, AWS (S3, CloudFront), Railway, Render, Nginx, Linux, GitHub Actions, CI/CD, OpenTelemetry, Grafana, logging

Quality: PyTest, mocks, automated testing, code review

Engineering: Clean Code, SOLID, DRY, DDD, design patterns, technical documentation, Scrum/Kanban, distributed systems

Professional Experience

Logon Informática — Mobile & Backend Developer

Jan 2025 – Present

Software house for education management, public administration and other sectors

- Develop Python/FastAPI microservices, REST APIs, asynchronous communication with **RabbitMQ** and object storage with **MinIO** for the Central da Escola app.
- Sole developer of the application since **version 3**, using **Flutter/Dart**, with more than **50 thousand active users** on Android and iOS.
- Lead the mobile area and handle development, testing, **CI/CD**, store publication, logging, documentation and liaison with internal teams and third-party systems.

Empório Sertanejo — Full-stack Developer — technical lead

Dec 2023 – Sep 2025

Retail franchise; proprietary ERP, POS and e-commerce SaaS

- **Led 3 developers** in building a SaaS that unified **ERP, POS and e-commerce**, using **Django/Python, PostgreSQL** and **Docker**.
- Implemented automated tests with PyTest and mocks, CI/CD with GitHub Actions and observability with OpenTelemetry and Grafana.
- Conducted requirements gathering and client negotiation, delivering loyalty programs, coupons, notifications and online sales.

VIRTUS-CC / Softex (UFCG) — ICT Resident — ISE group researcher

Nov 2025 – Present

One-year software residency program: 240h of training + practical immersion

- Ranked **1st** in the selection process (96/100 in the titles evaluation and 100/100 in the interview).
- Training in Software Engineering, agile methodologies, IoT, machine learning and design thinking, with projects in a multidisciplinary squad.
- Research LLMs applied to Software Engineering in the **Intelligent Software Engineering** group, with an article accepted at **XP 2026** (Springer LNBIP).

Animalesko — Backend Developer (volunteer)

Apr 2024 – Sep 2024

Social startup supporting stray animals

- Designed the application's cross-platform backend architecture, prioritizing low resource consumption, and documented the technical decisions.

- Worked as a research scholarship holder, leading the student group in two projects, and taught **Python** classes to approximately 60 students.
- Conducted an experiment comparing programming learning with and without AI support, with publications at national events.

Projects

- **pdfa-parser** — open-source Python library published on PyPI for converting PDFs to PDF/A and automatically validating them with GhostScript and VeraPDF, with synchronous and asynchronous APIs, CLI and container execution: pypi.org/project/pdfa-parser
- **Contratexto** — multiplayer web game built with FastAPI, WebSocket and semantic similarity, using NLP and an asynchronous queue: contratexto.onrender.com
- **Central da Escola** — Flutter school application with more than **50 thousand active users**, published on Android and iOS, with its own microservices.
- **ToDoApp** — Flutter application with Clean Code, SOLID, componentization, context isolation and BLoC, running on Android and Linux Desktop: github.com/Ilusinusmate/todoApp
- **Corretor ONHB** — application commissioned by IFPB teachers for automatic correction of National History Olympiad exams, built with Flutter and Electron.

Education

Bachelor of Computer Science — Federal University of Campina Grande (UFCG)

Jan 2025 – 2030

Integrated Technical Program — Federal Institute of Paraíba (IFPB)

Mar 2022 – Dec 2024

Additional training — Flutter Specialist and Python Backend Developer (DIO)

Publications and Awards (selected)

- **8 scientific works** published on AI, LLMs and Software Engineering, including an article at **XP 2026** (Springer LNBIP, 2nd author) and articles at **WEI 2025** and **WICS 2024** (Brazilian Computer Society).
- **Best expanded abstract** in the Scientific and Technological Initiation — ICT category at the **5th SIMPIF** (2023).
- **Champion of the Paraíba Informatics Olympiad** (2023), **gold** in the Advanced Junior category (2026) and finalist in the Brazilian Informatics Olympiad (2023).
