Summary

Mobile developer responsible for the **Central da Escola** application (**Flutter/Dart**), with more than **50 thousand active users**; I have been its sole developer since version 3 and lead the mobile development area. I cover the product's full cycle: feature implementation, **testing**, **CI/CD**, **publication on Android and iOS stores**, production monitoring and continuous evolution. I also develop the **backend** supporting the app (**Python/FastAPI**, **REST APIs**, microservices and messaging), enabling end-to-end integration between the application and its services. Computer Science undergraduate at UFCG and ICT resident at VIRTUS-CC/UFCG.

Technical Skills

Mobile: Flutter, Dart, Android, iOS, publication on Google Play and the App Store, state management (BLoC), componentization, *context isolation*, release cycle and production monitoring

Mobile quality: unit tests, *widget* tests and integration tests, code review, Clean Code, SOLID, DRY, design patterns, layered architecture

Integrations: REST APIs, WebSocket, authentication, integrations with internal and third-party systems

Backend (complementary): Python, FastAPI, Django, microservices, PostgreSQL, NoSQL, Redis, RabbitMQ, MinIO

Engineering: Git (*feature branches* and *pull requests*), GitHub Actions, CI/CD, Docker, AWS, logging and observability (OpenTelemetry, Grafana), technical documentation, Scrum/Kanban

Professional Experience

Logon Informática — Mobile & Backend Developer

Jan 2025 – Present

Software house for education management, public administration and other sectors

- Sole developer of the *Central da Escola* application since **version 3**, in **Flutter/Dart**, with more than **50 thousand active users** on Android and iOS.
- **Lead the mobile development area:** feature definition, prioritization, code review and team technical documentation.
- Conduct the **full release cycle:** development, testing, **CI/CD** and **publication on Google Play and the App Store**, with logging and production application monitoring.
- Develop the **Python/FastAPI microservices** consumed by the app, with **REST APIs**, asynchronous communication through **RabbitMQ** and object storage in **MinIO**.
- Act as a **liaison between teams** (product, backend and internal areas) for internal integrations and integrations with third-party systems.
- Published **pdfa-parser** on PyPI, an open-source PDF/A conversion and validation library used to support the company's products.

Empório Sertanejo — Full-stack Developer — technical lead

Dec 2023 – Sep 2025

Retail franchise; proprietary ERP, POS and e-commerce SaaS

- **Led 3 developers** in building a SaaS that unified **ERP, POS and e-commerce**, using **Django/Python, PostgreSQL** and **Docker**.
- Implemented **automated tests** (PyTest and mocks), **CI/CD with GitHub Actions** and **observability** (OpenTelemetry and Grafana) to investigate errors in staging and production.
- Conducted requirements gathering and direct negotiation with the client for more than 2 years, delivering revenue-related features (loyalty program, coupons and notifications).

VIRTUS-CC / Softex (UFCG) — ICT Resident — ISE group researcher

Nov 2025 – Present

One-year software residency program: 240h of training + practical immersion

- Ranked **1st** in the selection process (96/100 in the titles evaluation and 100/100 in the interview).
- Training in Software Engineering I and II, **agile methodologies**/Scrum, IoT, machine learning and design thinking, with projects in a **multidisciplinary squad**.
- Research in the **Intelligent Software Engineering** group on the use of LLMs in Software Engineering, with an article accepted at **XP 2026** (Springer LNBIP).

Animalesko — Backend Developer (volunteer)

Apr 2024 – Sep 2024

Social startup supporting stray animals

- Designed a **cross-platform** architecture (mobile and desktop over a single infrastructure), prioritizing low resource consumption, and documented technical decisions.

IFPB (CNPq / LAPLIN) — Scholarship researcher and Python instructor

2023 – 2024

Natural Language Analysis and Processing Laboratory

- Taught **Python** classes to approximately 60 students and led the student research group, with publications at national events.

Mobile Projects

- **Central da Escola** (Logon) — Flutter school app with **50 thousand+ active users**, published on Android and iOS, with its own supporting microservices.
- **ToDoApp** — Flutter app built as a deliberate exercise in **Clean Code**, **SOLID**, componentization, *context isolation* and **BLoC** as the state manager, running on Android and Linux Desktop: github.com/Ilusinusmate/todoApp
- **ChatApp** — Flutter mobile chat integrated with a custom FastAPI backend, exercising real-time communication and REST API consumption.
- **Corretor ONHB** — solution for automatic correction of National History Olympiad exams, commissioned by IFPB teachers, in mobile (Flutter) and desktop (Electron) versions, used by more than 30 teams.
- **Scheduling app** — **Clínica Dra. Daiane de Lima** — scheduling, customer and inventory management, replacing a paper-based process; freelance project from problem definition to delivery.

Education

Bachelor of Computer Science — Federal University of Campina Grande (UFCG)

Jan 2025 – 2030

Integrated Technical Program — Federal Institute of Paraíba (IFPB)

Mar 2022 – Dec 2024

Additional training — Flutter Specialist and Python Backend Developer (DIO)

Publications and Awards (selected)

- **8 scientific works** published on AI, LLMs and Software Engineering, including an article at **XP 2026** (Springer LNBIP, 2nd author) and articles at **WEI 2025** and **WICS 2024** (Brazilian Computer Society).
- **Best expanded abstract** in the Scientific and Technological Initiation — ICT category at the **5th SIMPIF** (2023).
- **Champion of the Paraíba Informatics Olympiad** (2023), **gold** in the Advanced Junior category (2026) and finalist in the Brazilian Informatics Olympiad (2023).
